WORKING EXPERIENCE

FULLSTACK DEVELOPER

IT Division Binus | Mar 2018 – Feb 2020

- Enhance and develop a core application that support learning and business activity in university used by students, lectures, and staff
- Developed an automated system to pair between new student and sophomore without conflicting with ongoing schedule
- Gave ideas to technical lead and manager from self experiment and past experience
- Collaboration with System analyst, Technical Lead, and other developer to create high quality application in a tightly mannered deadlines

PROJECTS

BLENDED LEARNING

PHP   C#   Asp.net   Code Igniter   Javascript   MySQL

An Interactive Web Application for student and lecturer continuing their lecturing session online. I Made a system for quiz entry, modify existing forum for current need, and created an automated system for generating students score based from their activity. With this application, we eliminate the need for student to attend to university on their short semester.

DIGITAL SIGNATURE

PHP   Javascript   MySQL   Jquery   Code Igniter

a Web based application for staff and lecturer to revise submitted students score and historical system. I develop a system for module access, Automation system for data entry, approval system, and email notification for staff and lecturer. This application has eliminated the usage of paper in document and the needs to meet face to face while making the process easier with automated notification

EDUCATION

BINA NUSANTARA UNIVERSITY

Computer Science | 2016 – 2020 | 3.64 / 4.00
